

Title tag

The <title> tag defines the title of the document. The title must be text-only, and it is shown in the browser's title bar or in the page's tab.

```
<!DOCTYPE html>

<html lang="en">

<head>

  <title>Title of web pages</title>

</head>

<body>

</body>

</html>
```

Link tag

The <link> tag defines the relationship between the current document and an external resource.

The <link> tag is most often used to link to external style sheets or to add a favicon to your website.

The <link> element is an empty element, it contains attributes only.

The <link> element, all browser support this tag.

eg. css link sheet

```
<link rel="stylesheet" href="(css path)" >
```

Style tag

The <style> tag is used to define style information (CSS) for a document.

Inside the <style> element you specify how HTML elements should render in a browser.

The <style> element must be included inside the <head> section of the document.

eg. change the text color of h1 we take style tag in head section and with the help of css i change the text color

```
<!DOCTYPE html>

<html lang="en">

<head>

<style>

  h1{

    color: blue;

  }

</style>

</head>

<body>

  <h1> hello world!</h1>

</body>

</html>
```
