

Tag Selectors

Definition: Select elements based on their tag name.

Usage: Used to apply styles to all elements of a specific type.

Example: Applying a style to all ``<p>`` tags.

ID Selectors

Definition: Select elements based on their unique ID attribute.

Usage: Used to apply styles to a single, unique element.

Example: Applying a style to an element with the ID ``#header``.

Class Selectors

Definition:- Select elements based on their class attribute.

Usage :- Used to apply styles to multiple elements sharing the same class.

Example: Applying a style to all elements with the class ``.highlight``.
